

# Payment terminals

---

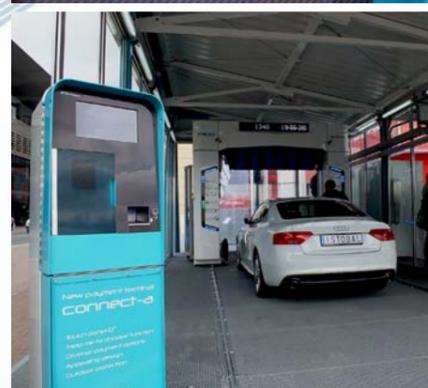

## connecting technologies

# connect-a, on the cutting edge

The new payment terminal **connect-a** enhances communication with the user.

**Connect-a** combines customisation with design on the one hand, and technology with functionality, on the other. It offers a variety of colours and modern payment systems devised to meet individual client needs. State of the art solutions to make progress in design and technology.

# codec, sheer simplicity

Simplicity, elegance and technology are the elements brought together by ISTOBAL to create payment terminal **codec**.

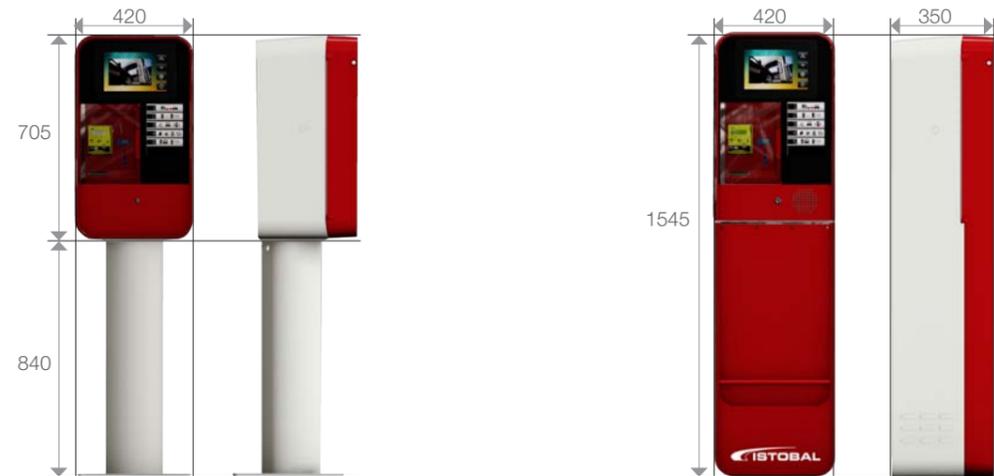

This model offers the most intuitive payment systems in the market, the *contactless method* or proximity and numerical code. Minimalism and functionality within reach.

# Features connect-a

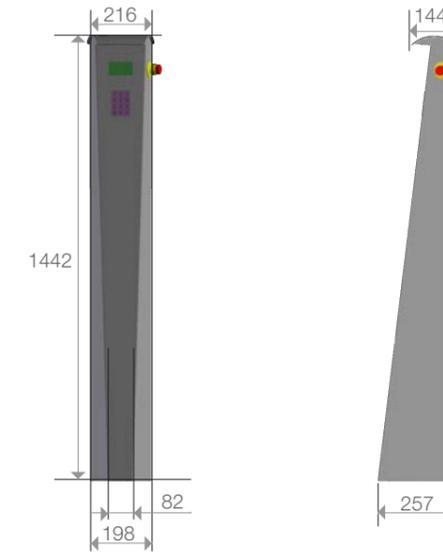

# Features codec

## DIMENSIONS

\*Dimensions in mm.

## DIMENSIONS

\*Dimensions in mm.

## WALL MOUNTED

The ideal option for enclosed facilities with a wall available for mounting.

## ON BASE

Adequate for installation at the entrance of the facility, for ease of user access.

## COMPLETE

The sturdiest option for outdoor facilities. The command post can be installed inside the wash machine. An optional vandal-proof door and transport wheels are also available.

## INSTALLATION

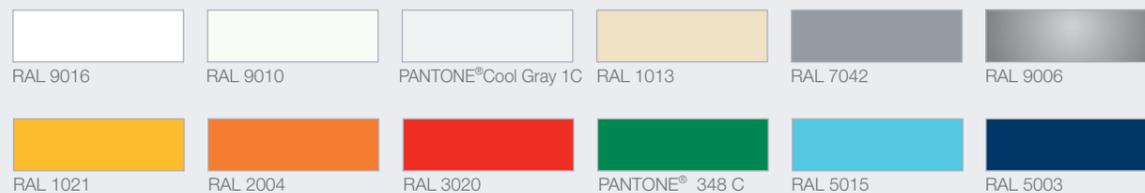

### WIRELESS VERSION NO CONNECTION

Wireless version for sites where a physical connection between the self-service and the shop terminal is not possible. The self-service communicates with the shop terminal by means of encrypted codes which also avoid potential fraud in the use of wash equipment.

### FULL VERSION WITH CONNECTION

Complete version for facilities where the connection between the payment terminal and the shop terminal is possible. This connection allows user to draw all self-service data and to combine both payment systems.

## COLOUR CHOICE

# Payment systems

The payment terminals include the latest developments in payment methods, from the punch card classic to the bar code reader.

## SIMPLE\*

The punch card payment system is a classic. It is simple but reliable.

## COMBINABLE

CARDS

COINS AND  
TOKENS

NUMERICAL  
CODE

PROXIMITY

BAR CODE

\* The punch card payment system is not compatible with the other payment methods.

# Additional options

## connect-a

### INTERFACE

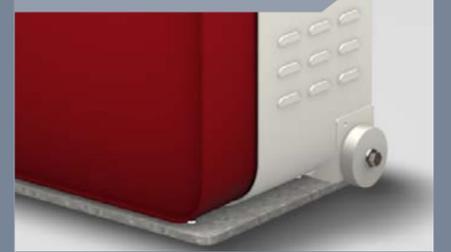

TFT touch screen with high-quality graphics guides users through the menus in a user-friendly way.

### INTERCOM

3.5" device consisting of a central intercom, a push button and a loudspeaker to ensure communication between the self-service and the shop in case of emergency.

### WHEELS

This option consists of two nylon wheels to facilitate the transport of the payment terminal.

## connect-a + codec

### SHOP TERMINAL RECORDER

This device is used to record the desired programs on proximity cards. It can also be used to issue wash codes.

### SHOP TERMINAL CODES

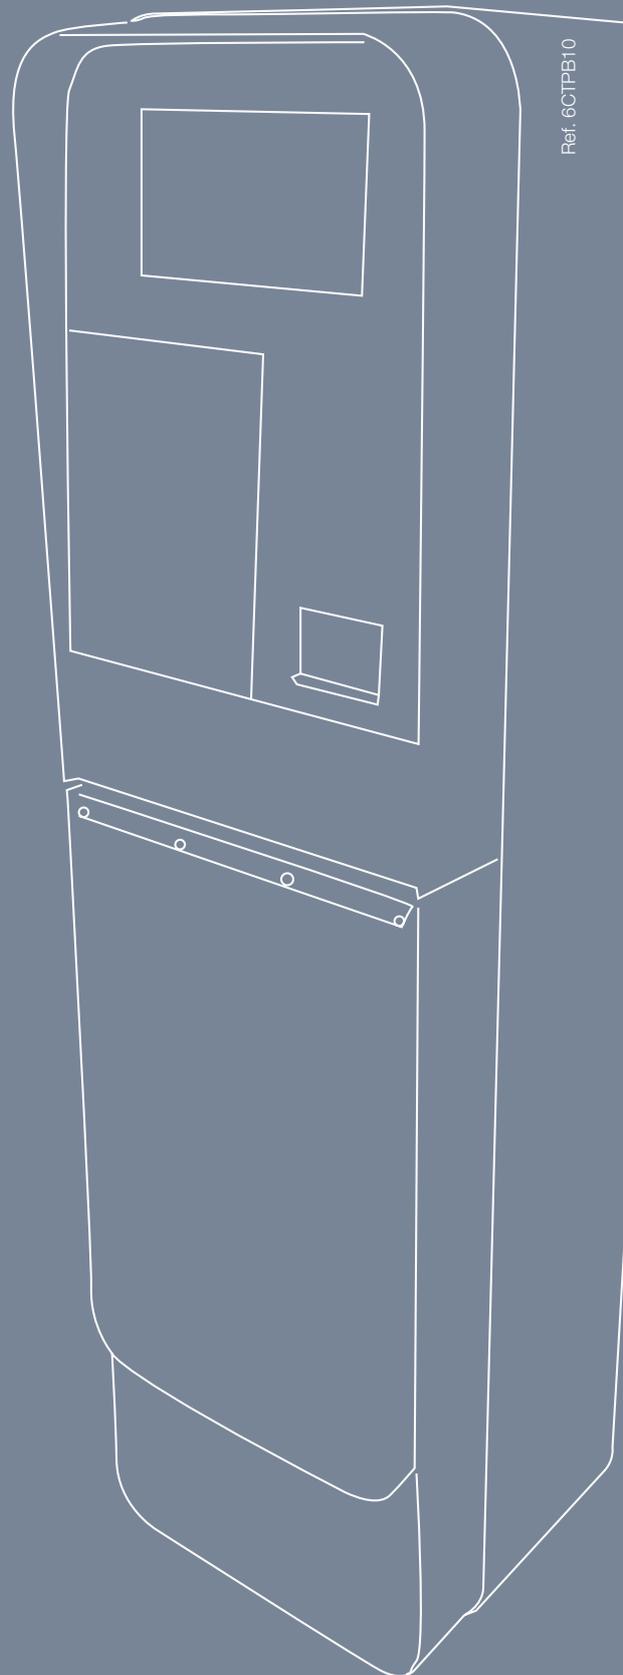

Touch screen device to issue wash codes.

### PRINTER

Connected to the shop terminal or the card recorder, it prints out the numerical codes and bar codes generated by them.
